EDUCATION

Caldwell University — Bachelor of Science in Computer Science

Aug 2024 – May 2028

Caldwell, NJ | GPA: 3.90/4.0

- **Honors:** Presidential Scholarships, St. Thomas Scholarships, Dean's List (2024, 2025)
- **Relevant Coursework:** Data Structures, Design & Analysis of Algorithms, Object-Oriented Programming (OOP), Database Management Systems, Operating Systems, Discrete Mathematics, Windows Programming, Calculus I

TECHNICAL SKILLS

Languages: Proficient: Python, JavaScript, TypeScript, HTML/CSS | Familiar: C, C#, PHP
Web/Frameworks: React, Next.js, FastAPI, Streamlit, SQLAlchemy, REST APIs
Data & ML: Pandas, NumPy, Scikit-Learn, Isolation Forest Models
Databases: MySQL, SQLite, PostgreSQL, Prisma, Supabase
Tools & Concepts: Git, GitHub, Vercel, ElevenLabs API, Anam API, JWT Auth, SDLC

RESEARCH EXPERIENCE

Summer Research Developer

Currently in Progress

Intelligent Budget Tracker & Anomaly Detection Platform

- Integrate a FastAPI backend with a Streamlit frontend, utilizing REST APIs and mapping an SQLite schema to handle UUIDs for robust transaction tracking.
- Build a CLI tool (`ingest_csv.py`) for targeted CSV data injection and implement a "Clean Slate" database protocol for sterile testing environments.
- Engineer a Pandas script (`generate_profiles.py`) to dynamically generate mathematically precise 90-day synthetic financial histories across 4 distinct user behavior profiles.
- Develop an Isolation Forest anomaly detector using scikit-learn that successfully identifies 95%+ of synthetic extreme spending spikes.
- Build a deterministic rule engine to filter fixed costs, translating raw anomalies into plain-English, color-coded "Coach Alerts" while detecting subtle, incremental "Subscription Creep".

PROJECTS & HACKATHONS

AI-Powered Portfolio Website

[Live Site](#) | [GitHub](#)

- Developed a serverless portfolio utilizing HTML/CSS/JS, integrating Llama 3.3 via the Groq API to provide contextual AI responses regarding project experience and technical skills.
- Implemented Web Speech API voice commands and simulated 2-way audio/video calls utilizing ElevenLabs TTS and the Anam API.
- Utilized Supabase to securely log and manage 100+ interactions including chat records, site analytics, and contact messages via an administrative dashboard.

QuickLoan Application

[GitHub](#)

- Built a full-stack loan processing application leveraging React, FastAPI, SQLAlchemy, and REST APIs.
- Implemented real-time application tracking, JWT authentication, and an administrative dashboard to securely and efficiently manage lending approvals.

Cougar Health – Mental Wellness WebApp

[GitHub](#)

Team Project — Cougar Hacks 2025

- Collaborated on a mental health support platform using Next.js, TypeScript, Prisma, and PostgreSQL for a hackathon competition.
- Integrated Groq/LLaMA AI chat support to handle anonymous user queries and built features for secure reporting and reward-based wellness quizzes.
